

Keelvar SAP Ariba Connector — Configuration Data Form

The Keelvar SAP Ariba Connector must be configured to enable Keelvar to communicate with the correct SAP Ariba environment. The information sought in the Configuration Data Form is required to configure the Keelvar SAP Ariba Connector. To learn how to obtain this information using SAP Ariba, refer to the *Keelvar SAP Ariba Connector — API Configuration Guide*.

You can request that the Keelvar SAP Ariba Connector be set up for your organization by providing the external configuration information in the Configuration Data Form and submitting the completed PDF using the [Contact Support form](#) on the Keelvar Support Portal.

The request will be reviewed and approved by Keelvar's Sales Team before being forwarded to Keelvar's Integration Team for processing.

Configuration Data Form

Information	Description	Production	Test QA
Realm	The name of the SAP Ariba realm. Example: MYCOMPANY-T		
OAuth token	The URL used to retrieve a bearer token for use with the SAP External Approval API. Example: https://api-eu.ariba.com/v2/oauth/token		
API Base URL	The URL prefix for the SAP Ariba External Approval API. This is the portion of the URL before api/sourcing-approval/v1/prod/changes in the External Approvals Get Changes API URL Example: https://eu.openapi.ariba.com/		
External Approval API			
OAuth Client Id	Credentials used to access the SAP Ariba API.		
OAuth Secret	Credentials used to access the SAP Ariba API.		
Application Key	Application Key of the application created in the developer portal to access the SAP Ariba API.		
API version	Version of the API to use.		
Event Management API			
OAuth Client Id	Credentials used to access the SAP Ariba API.		
OAuth Secret	Credentials used to access the SAP Ariba API.		
Application Key	Application Key of the application created in the developer portal to access the SAP Ariba API.		
API version	Version of the API to use.		
Surrogate Bidding API			
OAuth Client Id	Credentials used to access the SAP Ariba API.		
OAuth Secret	Credentials used to access the SAP Ariba API.		
Application Key	Application Key of the application created in the developer portal to access the SAP Ariba API.		
API version	Version of the API to use.		

Sourcing Project Management API			
OAuth Client Id	Credentials used to access the SAP Ariba API.		
OAuth Secret	Credentials used to access the SAP Ariba API.		
Application Key	Application Key of the application created in the developer portal to access the SAP Ariba API.		
API version	Version of the API to use.		
Contracts Web Service			
Import Procurement Contract Workspace URL	The URL of the SAP Ariba SOAP API for the Import Procurement Contract Workspace web service. Example: https://s1-eu.ariba.com/Sourcing/soap/<realm>/ContractWorkspacelImport?wsdl
